

## **Feedback requested during the on-site, independent audit under the IRMA Standard for Responsible Mining of PT TBP Harita's Nickel Mine, Obi Island, Indonesia**

Between April 15 and 23, SCS Global Services (SCS) auditors will be conducting an on-site third-party, independent audit of PT TBP Harita's Nickel Mine to evaluate its performance under the Initiative for Responsible Mining Assurance (IRMA) Standard for Responsible Mining.

The audit began on November 12, 2024, with a desktop review of documents provided by the mine. This next on-site phase provides all affected stakeholders the opportunity to give feedback on the mine's environmental, health, safety, and community performance. Feedback is welcome during the entire audit process. Comments received between March 15 and April 23, 2025 will be considered during the onsite assessment.

During the on-site stage of the audit, auditors will ask local stakeholders, including community members, organizations, public officials, and non-management mine workers to participate in interviews or meetings, and provide information using other means including WhatsApp, email and on-line. SCS will consider stakeholder comments, along with other evidence, to measure how Harita Nickel Mine performs relative to the IRMA Standard.

**Please contact SCS if you would like to provide input to this audit process. You can do so by interview or in writing. Interviews can take place in person, or virtually (telephone or videoconference) until April 23<sup>rd</sup>. Use the links, QR code, WhatsApp number or email below to contact SCS to request an interview, ask questions, or provide comments. Commenters' identities and remarks are kept confidential upon request.**

IRMA will publish the completed audit report at <https://responsiblemining.net>. The report will explain how SCS scored the mine site against the requirements of the 26 chapters of the IRMA Standard, and why. SCS will assign scores for each chapter. After the report is published, stakeholders may still comment on the mine's performance to help guide the operation's improvement as it moves through the IRMA 3-year audit cycle.

SCS is an IRMA-approved audit firm with head offices in Emeryville, California. For more information about SCS, please visit [www.scsglobalservices.com](http://www.scsglobalservices.com).

The IRMA Standard is the world's most comprehensive mining standard for industrial-scale mines and the only one equally governed by all stakeholders: mining companies, mineral purchasers, investors, organized labor, communities, and civil society NGOs. Mine site verification under the IRMA Standard is voluntary. For more information on the IRMA Standard requirements and certification, visit [www.responsiblemining.net](http://www.responsiblemining.net).
